Icons used in this workbook

1 Designing a utility network framework

Lesson introduction

Workflow for building a utility network

Considerations for the utility network structure

Utility network structure in a geodatabase

Software requirements

Exercise 1A: Build the utility network geodatabase (Water, Gas)

- Open a task in an ArcGIS Pro project

- Configure the utility network geodatabase

- Add a feature dataset

- Add a service territory

- Create the utility network datasets

- Create the domain network datasets

- Explore the utility network feature classes

Exercise 1B: Build the utility network geodatabase (Electric)

- Open a task in an ArcGIS Pro project

- Configure the utility network geodatabase

- Add a feature dataset

- Add a service territory

- Create the utility network datasets

- Create the domain network datasets

- Explore the utility network feature classes

Lesson review

Answers to lesson 1 questions

2 Organizing assets in a utility network

Lesson introduction

Defining asset groups using subtypes

Defining asset types using domains

Exercise 2A: Design the assets in a utility network (Water, Gas)

- Design the asset groups using subtypes
- Design the asset types using domains
- Display asset groups and asset types in a map
- Define assets for a line feature class
- Define assets for a boundary feature class

Exercise 2B: Design the assets in a utility network (Electric)

- Design the asset groups using subtypes
- Design the asset types using domains
- Display asset groups and asset types in a map
- Define assets for a line feature class
- Define assets for a boundary feature class

Considerations for designing assets

Lesson review

Answers to lesson 2 questions

3 Configuring the utility network properties

Lesson introduction

Purpose of the utility network properties

Overview of the network properties

Terminal configurations for devices

Exercise 3A: Define the utility network properties (Water, Gas)

- Add and set a terminal configuration
- Add and set a network category
- Review the tools for network attributes
- Configure rules for the network

Exercise 3B: Define the utility network properties (Electric)

- Add and set a terminal configuration
- Add and set a network category
- Review the tools for network attributes
- Configure rules for the network

Lesson review

4 Configuring the domain network properties

Lesson introduction

Domain network properties

Tier properties

Defining the domain network properties

Subnetwork properties

Considerations for the domain network properties

Exercise 4A: Configure the tier and subnetwork properties (Water, Gas)

- Create a tier

Configure a subnetwork

Review the domain network properties

Exercise 4B: Configure the tier and subnetwork properties (Electric)

Create a tier

Configure a subnetwork

Review the domain network properties

Workflow review

Answers to lesson 4 questions

5 Understanding the utility network data types

Lesson introduction

Where is the utility network stored?

Multiuser network licensing considerations

Associating a utility network storage option with an application

Exploring the components of an asset package

Lesson review

Answers to lesson 5 questions

6 Migrating source data into a utility network

Lesson introduction

Workflow for performing migration

Migration approaches

Choosing a migration approach

Exercise 6A: Use the append data approach (Water)

Export an asset package

Add fields for data mapping

Populate coded values

Append data to the utility network

Exercise 6B: Use the append data approach (Gas)

Export an asset package

Add fields for data mapping

Populate coded values

Append data to the utility network

Exercise 6C: Use the append data approach (Electric)

Export an asset package

Add fields for data mapping

Populate coded values

Append data to the utility network

The data loading approach

Exercise 6D: Use the data loading approach (Water)

Create the data loading workspace

Configure data mapping workbooks

Run the data loading tool

Apply the asset package

Exercise 6E: Use the data loading approach (Gas)

Create the data loading workspace

Configure data mapping workbooks

Run the data loading tool

Apply the asset package

Exercise 6F: Use the data loading approach (Electric)

Create the data loading workspace

Configure data mapping workbooks

Run the data loading tool

Apply the asset package

Reviewing common data migration errors

Lesson review

Answers to lesson 6 questions

7 Customizing a utility network

Lesson introduction

Creating a diagram template

Exercise 7A: Apply symbology to a diagram template (Water)

Create a diagram using an Esri out-of-the-box template

Apply the map symbology to a diagram template

Create a diagram with the updated template

Exercise 7B: Apply symbology to a diagram template (Gas)

Create a diagram using an Esri out-of-the-box template

Apply the map symbology to a diagram template

Create a diagram with the updated template

Exercise 7C: Apply symbology to a diagram template (Electric)

Create a diagram using an Esri out-of-the-box template

Apply the map symbology to a diagram template

Create a diagram with the updated template

Types of attribute rules

Evaluating attribute rules as a batch

Exercise 7D: Use attribute rules (Water)

Add a calculation rule

Add a validation rule

Evaluate the calculation rule

Evaluate the validation rule

Exercise 7E: Use attribute rules (Gas)

Add a calculation rule

Add a validation rule

Evaluate the calculation rule

- Evaluate the validation rule
- Exercise 7F: Use attribute rules (Electric)
 - Add a calculation rule
 - Add a validation rule
 - Evaluate the calculation rule
 - Evaluate the validation rule
- Using named trace configurations
- Utility network customizations
- Lesson review

8 Working with a deployed utility network

- Lesson introduction
- Completing a multiuser network for production
- Exercise 8A: Publish a multiuser utility network (Water)
 - Create an enterprise geodatabase
 - Add a utility network to an enterprise geodatabase
 - Perform post-processing
 - Publish the feature service
 - Update the Editor map data source
- Exercise 8B: Publish a multiuser utility network (Gas)
 - Create an enterprise geodatabase
 - Add a utility network to an enterprise geodatabase
 - Perform post-processing
 - Publish the feature service
 - Update the Editor map data source
- Exercise 8C: Publish a multiuser utility network (Electric)
 - Create an enterprise geodatabase
 - Add a utility network to an enterprise geodatabase
 - Perform post-processing
 - Publish the feature service
 - Update the Editor map data source
- Identifying potential changes in a utility network
- Making changes to a utility network
- Modifying a multiuser utility network
- ArcGIS compatibility for a utility network
- Upgrading a deployed utility network
- Workflow review
- Answers to lesson 8 questions

Appendices

- Appendix A: Data license agreement
- Appendix B: Answers to lesson review questions

Appendix C: Additional resources
Appendix D: Lesson stories
